

MACHINE LEARNING

In Q1 to Q11, only one option is correct, choose the correct option:

1.	Which of the following methods do we use to A) Least Square Error C) Logarithmic Loss	b find the best fit line for data in Linear Regression? B) Maximum Likelihood D) Both A andB	
	Answer – A		
2.	Which of the following statement is true about A) Linear regression is sensitive to outliers C) Can't say	at outliers in linear regression? B) linear regression is not sensitive to outliers D) none of these	
	Answer – A		
3.	A line falls from left to right if a slope is A) Positive C) Zero	? B) Negative D) Undefined	
	Answer – B		
4. Which of the following will have symmetric relation between dependent variable variable?		,	
	A) RegressionC) Both of them	B) Correlation D) None of these	
	Answer – A		
5.	Which of the following is the reason for over	fitting condition?	
	A) High bias and high varianceC) Low bias and high variance	B) Low bias and low variance D) none of these	
	Answer – C	b) none of these	
6.	If output involves label then that model is called as:		
	A) Descriptive model C) Reinforcement learning	B) Predictive modal D) All of the characters	
	C) Remorement learning	D) All of the above	
	Answer - C	PROBO	
7.	Lasso and Ridge regression techniques below. A) Cross validation	ong to? B) Removing outliers	
	C) SMOTE	D) Regularization	
	Answer – D		

MACHINE LEARNING

8.	To overcome with imbalance dataset which A) Cross validation C) Kernel	technique can be used? B) Regularization D) SMOTE
	Answer – D	
9.	The AUC Receiver Operator Characteristic classification problems. It usesto match A) TPR and FPR C) Sensitivity and Specificity	(AUCROC) curve is an evaluation metric for binary ake graph? B) Sensitivity and precision D) Recall and precision
	Answer – A	
10	. In AUC Receiver Operator Characteristic (A curve should be less. A) True	UCROC) curve for the better model area under the B) False
	Answer - True	
 11. Pick the feature extraction from below: A) Construction bag of words from a email B) Apply PCA to project high dimensional data C) Removing stop words D) Forward selection 		
	Answer - B	
Q 1:	2, more than one options are correct, cho	ose all the correct options:
	•	Equation used to compute the coefficient of the Linea

In C

- ır Regression?
 - A) We don't have to choose the learning rate.
 - B) It becomes slow when number of features is very large.
 - C) We need to iterate.
 - D) It does not make use of dependent variable.

Answer – A and C

MACHINE LEARNING

Q13 and Q15 are subjective answer type questions, Answer them briefly.

13. Explain the term regularization?

In general, regularization means to make things regular or acceptable. This is exactly why we use it for applied machine learning. In the context of machine learning, regularization is the process which regularizes or shrinks the coefficients towards zero. In simple words, regularization discourages learning a more complex or flexible model, to prevent over fitting.

14. Which particular algorithms are used for regularization?

Ridge regression

Lasso

Drop

15. Explain the term error present in linear regression equation?

Within a linear regression model tracking, the error term is the difference between the expected value at a particular time and the value that was actually observed. The standard error of the regression, also known as the standard error of the estimate, represents the average distance that the observed values fall from the regression line. Conveniently, it tells you how wrong the regression model is on average using the units of the response variable.
